## Multi-set Parallel Solution 发电机组多机并联解决方案

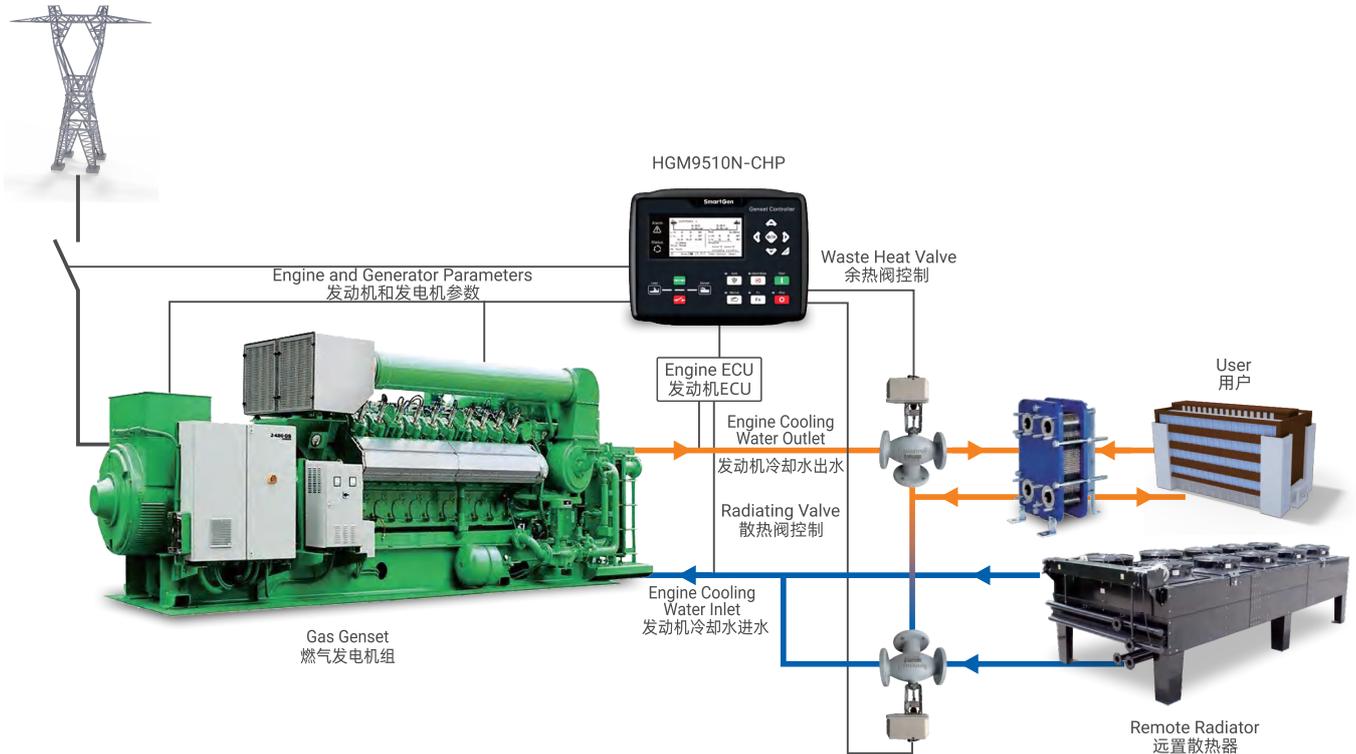

Help 32 gensets with same capacity /different capacity to realize automatic synchronization and load share.  
HMU15N genset remote monitoring controller is suitable for remote monitoring single/multiple HGM9510N genset controller, fitting with LCD display, touch screen, so this controller is reliable and easy to use.

可满足多达32台同容量或不同容量的机组自动同步和负载均分。

HMU15N发电机组远程监控控制器采用大屏幕液晶(LCD)人机界面显示，适用于远程监控单台或多HGM9510N发电机组控制器，触摸屏操作简单，运行可靠。

## Gas Genset Controller (Combined Cooling, Heating and Power) 燃气发电机组控制器（冷热电联供）

HGM9510N-CHP control system is specially developed for the combined heat and power application of gas gensets. It not only has the function of mains grid connection, but also can collect equipment parameters and control external equipment through various expansion modules, and can perform PID control for each valve.

When the engine inlet temperature exceeds the set temperature, the waste heat valve gradually opens to provide the user with waste hot water and stabilize the engine cooling water inlet temperature to the set value.

If the engine temperature continues to rise and the waste heat valve is fully open, open the cooling valve so that the engine circulating water can be cooled through the radiator.

HGM9510N-CHP控制系统是专为燃气发电机组热电联供应用开发，不仅具有市电并网功能，还可通过各种扩展模块来采集设备参数和控制外部设备，并可以对每个阀进行PID控制。

发动机进机温度超过设定温度时，余热阀逐渐打开，给用户供热热水，并使发动机冷却水进机温度稳定到设定值。

如果发动机温度持续升高并且余热阀全开后，打开散热阀，使发动机循环水可以通过散热器进行冷却。
