### Overview

Used for air compressor with diesel-driven engine in order to realize air compressor start/stop, data measurement, maintenance, alarm protection and “Three Remotes” functions. It can automatically adjust speed based on the discharge pressure of air compressor, and can control various ECU or non-ECU diesel air compressors.

### Features

- 3.5-inch color LCD display, multiple languages to select
- Smart LCD heating system allows it to work under low temperature of -40°C
- Front panel integrates emergency stop button, power on/off switch knob, and high/low pressure switch knob, which is easy to use with integrated design
- DPF regeneration function supports non-road Stage IV engines
- Five active B+ outputs adopt 15A replaceable automotive blade fuses for overcurrent protection, which is easy to be replaced
- Five digital inputs can be configured as active under high level or low level
- Speed can be obtained from speed sensor or generator W/L
- DC5V output
- Control functions of heater, cooler, fuel pump and screw oil cooler
- Real time clock, Event log (200), Maintenance (10) and ECU information display
- 6 ways of analog sensors, 3 ways of fixed resistance type sensors, and 3 ways of auxiliary resistance/current/voltage type sensors
