## 1 DESCRIPTION

This protocol describes the module RS485 half-duplex serial port's reading and writing command format, and the definition of internal information & data for the third-party to develop and use.

The module works as a slave module, and uses Modbus-RTU protocol, but it doesn't support other protocols, such as Modbus-ASCII, etc.

Communication address: 1~254 (Default: 1)

Baud rate: 9600/19200/38400bps (Default: 9600bps)

Start bit: 1 bit

Data bit: 8 bits

Parity bit: None

Stop bit: 1 bit or 2 bits (Default: 1 bit)

Function code supported: 03H, 06H. Function code 03H is used for reading controller's alarms, status and various kinds of electric parameters; Function code 06H is used for writing single point register.

Data checking method: CRC16.

The register data inside the controller are packed as two bytes per register.

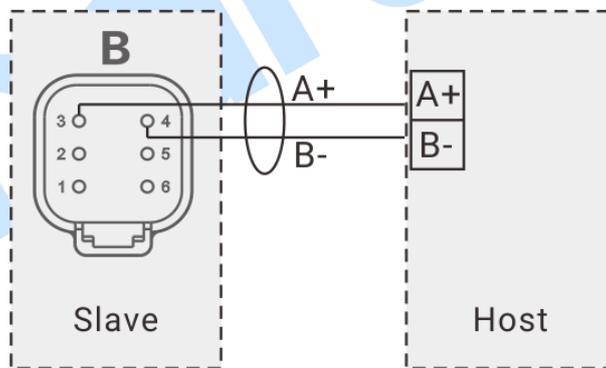

Transmission distance: At a baud rate of 9600bps, the maximum transmission distance can reach up to 1,000 meters with 120-ohm shielded twisted pair cable.

A maximum of 120 registers can be read per request.

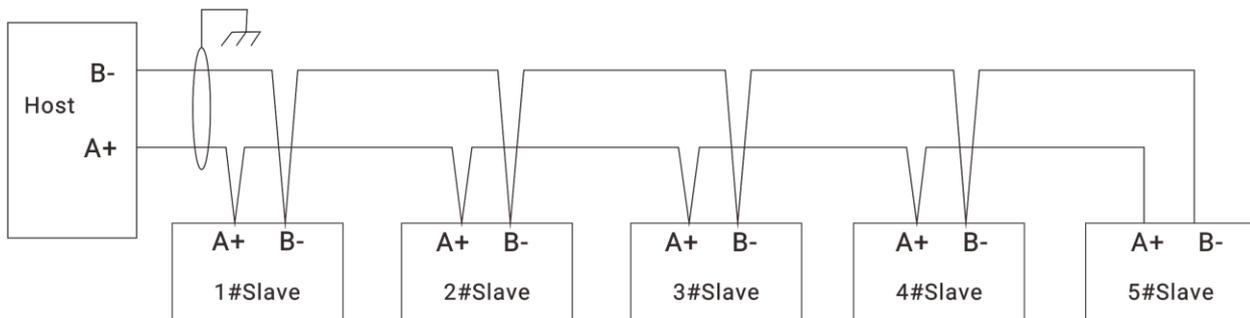

It can support the communication of 32 networked modules.

RS485 cabling must use shielded twisted pair cable, and one end of the shield should be grounded.

## 2 WIRING DIAGRAM

**Fig.1 Single Device Communication Wiring Diagram**

**Fig.2 Multiple Devices Communication Wiring Diagram**

**NOTE 1: Please configure each module's communication address before networking. Same module address is not allowed in one network.**

3 MODULE INTERNAL REGISTER ADDRESS AND DATA

3.1 FUNCTION CODE 03H MAPPING ALARM AND COIL STATUS OF DATA FIELD

Table 2 Alarm and Coil Status of Data Field

Modbus Address	Function	Description
000.0	Common Alarm	“0” means there is no common alarm “1” means there are common alarms (000.0 means the Boolean value at bit 0 of address 000) The content listed below follows the same rule
000.1	Common Warning	
000.2	/	
000.3	Normal Running	
000.4	LCD Heating Status

**3.3 FUNCTION CODE 06H MAPPING DATA REGISTER FIELD**

**Table 4 Data Register Field**

Modbus Address	Function	Ratio	Description	Remarks
0000-0072	/			
0072	Controller Date: Year	1	16-bit Unsigned	Save the last two digits of the Year only.
0073	Controller Date: Month	1	16-bit Unsigned	
0074	Controller Date: Day	1	16-bit Unsigned	

**4 EXAMPLES OF MESSAGE FRAME FORMAT**

**4.1 FUNCTION CODE 03H**

With the slave address 01 and the start address 0026H, three pieces of data are as follows (each data length is 2 bytes).

**Table 5 Examples of Data Address**

Address	Data (Hex)
0026H	0014
0027H	0014
0028H	0005

**Table 6 Examples of 03H Master/Host Request**

Master/Host Request	Bytes	Examples (Hex)
Slave Address	1	01 Send to Slave 01
Function Code	1	03 Read single point register
Start Address	2	00 Start address is 0026H 26
Quantity of Registers	2	00 Read 3 registers (6 bytes in total) 03
CRC Code	2	E4 CRC code calculated by the master/host 00

**Table 7 Examples of 03H Slave Response**

Slave Response	Bytes	Examples (Hex)
Slave Address	1	01 Return the slave address 01
Function Code	1	03 Read single point register
Quantity of Bytes	1	06 Read 3 registers (6 bytes in total)
Point 1 Data	2	00 Content of Address 0026H 14
Point 2 Data	2	00 Content of Address 0027H 14
Point 3 Data	2	00 Content of Address 0028H 05
CRC Code	2	91 CRC code calculated by the slave 71
